LIGHTING & AUTOMATION

Shaping spaces through
Light & Control

Our Philosophy

At Prestige, we believe that smart home systems should represent a seamless extension of your home's architecture, not a disruption to it.

Founded on the principle of engineering excellence, we specialize in consolidating complex mechanical systems—such as multi-split VRF air conditioning, architectural motorized shading, and bespoke dimmable lighting arrays—into elegant and intuitive control touchpoints. By collaborating closely with elite interior designers, estate architects, and custom home builders, we ensure that technological hardware is cleanly integrated, leaving your design clean, open, and uncluttered.

Our solutions avoid generic off-the-shelf control methods. Instead, we design unified systems using solid-metal control keypads, customized touch screens, and paintable invisible drywall speakers that deliver concert-quality audio without visual intrusion. The result is a space that feels calm, elegant, and completely responsive to your presence.

Vision

To redefine modern living by creating intelligent spaces where advanced technology disappears into exceptional design—delivering seamless comfort, effortless control, and timeless luxury for every home and commercial environment.

Mission

To deliver intelligent automation solutions that seamlessly integrate lighting, climate, shading, audio, security, and building controls into one intuitive system—creating elegant, reliable, and future-ready spaces through engineering excellence and innovative design.

Intelligent Lighting Control

Transform your living space with customizable lighting scenes. Program circadian schedules that align with natural daylight, enhance architectural features, and manage your entire villa's ambiance through bespoke metal keypads or mobile interfaces.

- Architectural Dimming & Scene Control
- Biodynamic Circadian Rhythm Integration
- Premium Metallic Keypads & Engraved Controls

Achieve optimal indoor climate balance in every room. Our integrations consolidate HVAC controls into sleek interfaces, regulating temperature, humidity, and fan speed dynamically. Optimize energy use while keeping your villa at the perfect comfort level.

- Smart Thermostat & HVAC Consolidation
- Multi-zone Climate Settings
- Energy-efficient Eco-Modes

AC Control

Automate your window treatments to optimize natural light, protect fine art and furnishings from UV exposure, and ensure complete privacy. Shades adjust automatically based on the sun's position or the time of day, operating in near-silence.

- Ultra-quiet Motorized Rollers & Tracks
- Sun-tracking & Astronomical Clock Control
- Sheer, Blackout, and Light-filtering Integration

Motorized Shades & Curtain Control

Create highly functional, aesthetic corporate environments. From luxury showrooms and galleries to executive boardrooms and hotel lobbies, we design dynamic lighting systems that boost productivity, set an impressive corporate tone, and save energy.

- Corporate Boardroom & Lobby Lighting
- Daylight Harvesting & Occupancy Control
- Scheduling & Power Dashboard Integration

Smart Commercial Lighting

Consolidate large commercial building climate and shading systems into a unified management platform. Automate motorized roller blinds to prevent screen glare for staff, and schedule temperature rollbacks for empty conference rooms and after-hours operation.

- Centralized BMS & BACnet Integrations
- Automated Glare & Heat Control
- Dynamic Off-Hour Energy Management

Smart Commercial Shading & Climate Control

Safeguard your corporate operations. We engineer robust commercial perimeter safety systems, integrating motion-tracking grids, glass-break and window sensors, environmental leak detection, and scheduled security lighting simulations.

- Intrusion & Motion Sensor Grids
- Environmental Flood & Leak Protection
- Vacancy Lighting Simulations & Sirens

Smart Business Security
